# LOADER BUCKETS

**HARDOX**<sup>®</sup>  
IN MY BODY

## GENERAL PURPOSE

To fill quickly material needs to roll. AMI angles the bucket floor up slightly helping to lift material into the bucket. Smooth curves and open design makes the clean out easy without material packing into tight corners.

## HEAVY DUTY GENERAL PURPOSE BUCKET

AMI's Heavy Duty General Purpose Bucket is made of 100% Hardox steel and is ideal for highly abrasive work in gravel pits or rock quarries.

## SPADE NOSE

Make your point with the AMI Severe Duty Spade Nose Bucket. Built for handling rock in mining and quarry applications, the AMI Spade Nose loads easily with minimal wear. Reinforced plating on the bottom and Hardox wear plate all around make this bucket rock solid.

## FERTILIZER

Designed for granular loads, the AMI Fertilizer Bucket's cubic yard volume is measured at struck level capacity instead of heaped.

## WOODCHIP

Designed for light duty applications, the AMI Woodchip Bucket increases visibility using a metal grate across the top of the bucket.

## SNOW

Get big volume and high visibility with the AMI extra wide Snow Bucket and Basket for efficient snow removal.

General Purpose bucket sold separately shown for approximate scale comparison.

Auto-Lock

## SIDE DUMP

Easily handle material on highway construction sites, trenches and roadways without obstructing traffic. The Side Dump pivots smoothly using a cushioning cylinder, slowing the movement at both ends of the stroke. For normal dumping, the auto-lock secures the non-pivot end, preventing the bucket from side pivoting during dumping and filling.

## ROCK SCREENING

Get what you want and leave the rest with the AMI Rock Screening Bucket. Designed to effectively sift out rocks, brush or other large debris while leaving your fill where it belongs. Reduce your load waste while improving the productivity and performance of your machine.

## WASTE HANDLING

With a bolt-on rubber edge that acts as a squeegee for wet, sloppy material, this bucket is perfect for the job of waste handling.

Retracted

Extended

## EJECTOR BUCKET

Load and unload material faster with AMI's Ejector Bucket. Designed with two hydraulic cylinders that push the floor forward when the load is full, material releases quickly without the need to dump the bucket.

## HIGH DUMP

The High Dump Bucket features a bottom pivot point allowing the operators more bucket clearance when emptying a load.

## HIGH DUMP WITH REMOVABLE GRAPPLE

Get all the features of the High Dump Bucket with an optional Removable Grapple.

## 4-IN-1

Jack of all trades, the AMI 4-in-1 Bucket gives you the ultimate versatility, handling all the details on your job site.

## WASTE HANDLING PILING

Stay on top of the pile with AMI's Waste Handling Piling Bucket. The bucket's high profile is designed for maximum capacity, allowing you to move large volumes of material easily and efficiently.

## COAL STOCKPILE

The AMI Coal Stockpile Bucket is used to load hoppers, conveyors, trucks or train cars from loose coal stockpiles. AMI Coal Stockpile buckets are 15-20% larger in capacity than coal seam buckets.

# LOADER GRAPPLES

## ACCESS MAT

Designed for high visibility and a mighty strength-to-weight ratio, grip on your load and keep it secure.

Secure Handling

Easy Positioning

## REMOVABLE

General purpose Wheel Loader Bucket with a removable grapple.

## GARBAGE

Large, semi-enclosed grapples contain and compress small, light material, making it easier to transfer and manage waste without spillage.

## SCRAP

The cutout sidewall handles large loads of awkward, oversized material while the heavy-duty grapples clamp the load secure.

High Visibility

9" Side Shift Off Center Option

5° Tilt Shift Option

## PIPE & POLE

Keep your load secure with the 2-stage hydraulic grapple, designed to pick the load and clamp down evenly on the entire row of pipe or poles for safe travel.

## MULTI-PURPOSE

With replaceable bolt-on tines, this hydraulically controlled grapple is ideal for handling loose material like compost or manure.

## SAW LOG GRAPPLE

Designed to handle large volumes of logs at the sawmill, AMI's Saw Log Grapple features a beveled tine profile for extra gripping power to withstand the toughest lumber mill applications.

## LOG GRAPPLE WITH LIVE TINE

Maintain exceptional control of your load with AMI's Log Grapple with Live Tine. For log and lumber applications, operators can prevent logs from being damaged by adjusting the tines to the precise height prior to loading.

## FEEDLOT

Handle bales and silage with the AMI Feedlot Grapple. Synchronized yet independent, the dual grapples hold an uneven load steady.

## LARGE DIAMETER PIPE

With high visibility and tight radius, the by-pass grapple is able to clamp tightly around 6" diameter poles. The grapple hydraulic system has nitrate treated rods, cushioning cylinders and spherical bearings.

## RAKE

Operators are now able to clear away scrub more efficiently by reducing the amount of soil collected along with the brush.

## PIPE & POLE - YARD

The Pipe & Pole Yard Grapple's light weight design provides high visibility without sacrificing safety. Keep your load secure with the single parallel hydraulic grapple arm.

# LOADER FORKS

## HYDRAULIC

Hydraulically powered forks allow for quick adjustability of fork spacing, all from the seat of the cab.

## PALLET

Add versatility to your loader with the AMI variable width Pallet Fork that locks the tines in place easily.

## SIDE SHIFT FORK RACK

AMI's Side Shift Fork Rack easily shifts the entire rack from side to side for precise pallet handling.

## MANURE

Designed for the precise handling of manure.

## LUMBER

Flush with the extended backguards, the extra wide tines keep wide loads of piled lumber in place with strength and stability.

## LOG & LUMBER

Hold your own with the powerful clamp that wraps around the load. Ideal for cut logs or milled lumber, this fork/grapple makes awkward material handling an easy task.

## QUARRY EXTRACTING FORK

Working in the quarry's tough, abrasive environment, AMI's Quarry Extracting Fork is a rock solid performer. Capable of pulling out and transporting heavy rocks across the quarry, this fork improves productivity in the harshest conditions.

## LOADER BLADES

MY INNER **STRENX**

**HARDOX**  
IN MY BODY

### DOZER BLADES

The AMI Dozer Blade's heavy-duty design provides 30-degree angle adjustment, 10-degree side-tilt and is available in widths from 12'-16'. Optional bolt-on width extensions, high volume endplates and height extensions are also available.

### LOADER SWEEPERS

Ideal for snow removal on roads, parking lots, intersections and runways, the KingSpin Hydraulic Rotary Sweeper features double direct hydraulic drives, heavy-duty swivel caster wheels and 15° hydraulic angling in either direction.

## LOADER COUPLER

### HYDRAULIC QUICK COUPLER

MY INNER **STRENX**

Enclosed hydraulics protect your coupler from the elements, while greaseless bushings eliminate the need for daily maintenance.

## LOADER BOOM POLES

### HYDRAULIC BOOM POLE

Extend and contract hydraulically using controls inside the cab for greater efficiency and safety.

### MECHANICAL BOOM POLE

Add crane versatility to your loader with the Extendible Boom Pole from AMI.
