IN MY BODY

Nerves of steel is what it takes to supply AMI Attachments with raw materials that stand up to the harsh conditions you face everyday. That's why inside most of our extreme duty products is Hardox® steel, a recognized name in steel that is synonymous with strength, durability and trust.

Hardox® wear steel provides a unique combination of hardness and toughness, resulting in first-class products that are manufactured to weigh less, withstand abrasion, perform better, carry more payloads and last longer—all under the harshest conditions.

Working in partnership, Hardox® is an approved supplier and AMI Attachments is a certified "Hardox® in My Body" member. Together, this means high performance products that are built with a toughness that goes unmatched.

When you see the "Hardox® in My Body" trademark logo on our attachment products, you can be guaranteed that the equipment is manufactured from genuine Hardox® wear steel, delivering exceptional wear-resistance and impact strength.

So whether you're digging, ripping, piling or pulverizing, go ahead and power through it with confidence, because it's not called an AMI Attachment before its mettle is tested.

MY INNER
STRENX™

In the constant battle for higher-performing steel products, strong and thin win. You need stronger steel in thinner dimensions to make products stronger yet lighter and more sustainable. That's why we developed Strenx™, our extensive portfolio of high-strength, high-performance structural steels.

Strenx™ has one of the world's most extensive product programmes, both in terms of dimensions available, and with yield strengths ranging from 600 to 1300 MPa. Strenx™ can produce outstanding results in the hands of ambitious designers who can cut 20 to 30 percent or even more weight off steel structures. Strenx™ helps your products — and your business — reach new levels of performance.
